KeyMacro is a virtual remote control for your internal or external keyboard. This software will listen to any keyboard connected on your computer and display it in the Windows desktop. All the keystrokes are recorded and will be instantly displayed on your keyboard allowing you to type with ease. You can configure it to display any letter of the keyboard or to be the active window key. The interface has many options for configuring: Set the key combinations to be displayed on the keypad, configure to display all your windows on the desktop or the active window key, configure the layout of the keypad and more. With the built-in timer, you can schedule your keystrokes to be executed automatically after a certain interval. It can be useful for those who want to monitor users or want to use their keyboard in a different way.Q: Problema al usar datos desde una tabla en otros Hola como estoy recogiendo datos desde una tabla en otros y no puedo poner las variables porque me devuelve este error: "Warning: mysqli_fetch_array() expects parameter 1 to be mysqli_result, boolean given in C:\xampp\htdocs\sims2\backend\controllers\admin.php on line 35" Esta es la parte que solo hace la consulta: prepare('SELECT * FROM __db.tabla_titulos'); $stmt->execute(); $stmt->bind_result($id, $segundo, $titulo, $texto, $area, $asunto, $fecha_subida, $fecha_actual, $giro, $foto, $nombres, $apellidos, $horas, $favoritos); //$stmt->store_result(); //$stmt->fetch(); ?> La consulta es correcta porque si la hago en mysqli tengo el resultado. A: Aca usa el fetch_assoc() para obtener datos asociativos: //$stmt-> 70238732e0
