Elaboration, debates, and revision. V-8. -. lex (n.d.). BibleLex 8 keygen freeQ: UITableView won't load any data I have read a lot of questions about this, and they all have different solutions but none of them worked for me. I am wondering if it has something to do with where I am setting up my UITableView. My current problem is I am trying to populate a UITableView with NSFetchedResultsController, but it just won't populate it. When I try to NSLog a certain element or print a specific line in the method tableView:cellForRowAtIndexPath:, it shows up the right data but the table won't populate. I'm at a loss. If you need additional information, please let me know. I am setting up my table like so: NSFetchedResultsController *fetchedResultsController = [[NSFetchedResultsController alloc] initWithFetchRequest:fetchRequest managedObjectContext:self.managedObjectContext sectionNameKeyPath:sectionNameKeyPath cacheName:nil]; self.fetchedResultsController = fetchedResultsController; [self.tableView setDelegate:self]; [self.tableView setDataSource:self]; [self.tableView setFetchBatchSize:20]; [self.tableView reloadData]; Here is my NSFetchRequest - (NSFetchedResultsController *)fetchedResultsController { if (_fetchedResultsController!= nil) { return _fetchedResultsController; } NSFetchRequest *fetchRequest = [[NSFetchRequest alloc] init]; NSEntityDescription *entity = [NSEntityDescription entityForName:@"Regs" inManagedObjectContext:self.managedObjectContext]; [fetchRequest setEntity:entity]; [fetchRequest setFetchBatchSize:20]; NSString *sortBy = [[NSUserDefaults standardUserDefaults] objectForKey:@"sortBy"]; if (sortBy == nil) sortBy = @"lastName"; NSS
