Read the detailed description of the Selina Concise ICSE Solutions for Class 9 Chemistry Book with introduction part . A comprehensive book for the ICSE Chemistry Class 9, from Selina . ICSE Class 9 A Complete Study Guide for You. Even if you are a little weak in mathematics, if you are interested to appear for this exam, then this book is going to be very useful for you. trends of mercury in foods of dairy cows and pregnant women. The study of the trends of mercury in foods of dairy cows and pregnant women. The aims of the study were to study the trends of mercury in the milk and blood samples of human beings of dairy cows in Sri Lanka. The methodology involved in this study was that of survey. The study population was chosen from the milk and blood samples that had been collected for the lactating and pregnant cows of the milk analysis centre. Those included in the study were females of the following age groups: under 20 years old, 20 to 30 years old, and over 30 years old. The questionnaire consisted of 13 items as shown in table 1. The results were evaluated using the descriptive statistics and the analysis of variance technique. The results indicated that the mercury content in the milk samples were significantly lower than that in the blood. No significant differences were found between the male and female cow milk samples. However, significant differences were found between the male and female human milk samples in the mercury content. The mercury content in the blood samples of male humans was significantly lower than that in the blood samples of female humans. A significant positive correlation was found between the mercury content in the milk and blood samples of cows. A significant positive correlation was found between the mercury content in the milk and blood samples of humans. Significant difference was found between the mercury content in the blood samples of male humans and those of female humans. Significant positive correlation was found between the mercury content in the milk and blood samples of women. Significant positive correlation was found between the mercury content in the milk and blood samples of women. Significant difference was found between the mercury content in the blood samples of men and women. Table 1: Descriptive statistics of the variables. All of the statistical analysis techniques were applied. Analysis of variance Table 2: Analysis of variance. Results and discussion The mercury content in ba244e880a
