.59 KB version of the GCC Assembler. *Warning:* This tool is intended to be used with fixed-size microcontrollers and not with variable-size ones. The rationale behind the AVR Assembler is: ----- a) It should be very fast, since it does no linking b) It can take advantage of the maximum instruction size of the platform c) It allows you to build small C programs, which would be too large otherwise. *Important:* The AVR Assembler requires an explicit prototype, but it does not require a command-line interface. The resulting code needs to be executed in a standard AVR application to verify functionality and board compatibility. You can find the source code of the AVR Assembler at the following web page: . The AVR Assembler includes a number of options, that allow you to change the behavior of the tool. In this tutorial we will discuss the following options: ----- -W/n *n* Clang-style attribute that disables warnings. -asm-version *n* Sets the assembly version number to *n* -v *n* Displays the version of the tool -w Disables the compilation of object files -O *n* Sets the optimization level. *n* can be: '0', '1', '2', or '3'. -o *file*

Download the source package (I downloaded avra-1.3.0.tar.bz2) ... microcontroller family It can be used as a replacement for 'AVRASM32.H' (as in 'AVRASM' (AVR) and 'AVRASM32' (AVR) on AVR) and can be installed via 'AVRISP mkII' (AVR) for AVR. This package contains several files that can be downloaded to AVR microcontrollers via 'AVRISP mkII' (AVR), 'AVRISP mkII' (AVR) or any other AVR microcontroller 'AVR' (AVR) via 'AVRISP mkII' (AVR) or 'AVRISP mkII' (AVR) via other AVR microcontrollers 'AVR' (AVR) . In order to download the file you need to click on the Download file link. fffad4f19a
