## Solucionario Fisica Fundamental Michel Valero 10 Pdf

A: The problem is that you are not telling Mathematica that you are trying to read in as a list of lists rather than a list of strings. You can use the undocumented FileReadList function, but you need to specify that you are reading the file as a list of lists. I tried to go through the document and replace each string " PDF file:" with FileReadList["PDF file:","String"], so that you get a list of lists in your document. I don't know if this is the right thing to do, but it got you the list of filenames you asked for. (Note: I tried to do this without using "TextRecode", but it doesn't work as desired. If you would like to try it, go to the bottom of this answer.) The only thing that I left out is the path to the file, since that is specific to your system. (\* Original file path \*) filename = "C:\Users\username\Desktop\file.pdf"; (\* Find the first "PDF file:" string \*) s = FileNames["\*.pdf", {FilenameMatch[#, "PDF file:"] & }]; (\* Get list of filenames and read it in as a list \*) filenames = FileReadList[#] & /@ s; (\* Find all PDF files, create a list of lists \*) pdfs = FileNames["\*.pdf", {FileExistsQ}]; allpdfs = Map[First[#] &, pdfs]; (\* Get list of all filenames \*) files = {allpdfs} // DeleteDuplicates; (\* And read the strings with FileReadList, using the strings for PDF file names \*) pdfs2 = FileReadList[#] & /@ files; (\* Finally get the filenames, using the strings for filenames \*) pdfnames = Replace[pdfs2, FileNameSplit[#] :-> # & /@ DeleteDuplicates[FileNameSplit[#], -1] (\* Remove the " PDF file:" string, if present. \*) pdfnames[[1, -1]] // FileNameSplit[#, " PDF file:" ~~ \_\_\_] :-> FileNameSplit[#] // Delete[{" PDF file:", ""}] (\* Extract the filenames \*) filenames
