Fix Merge Excel Files error - Good fixes for Merge Excel Files errors - How to fix Merge Excel Files Error?There are over 50,000 hydraulic fracturing or "fracking" wastewater spills from an undisclosed number of shale gas wells in Pennsylvania, according to a new report from PennFuture and Earthworks. The spillage occurs as operators frack gas wells and have to dispose of wastewater that can be explosive when mixed with other chemicals. The report by Earthworks states that there are 11,510 spills, and says that at least 4,400 have been reported, but if there have been unreported spills, that number could be much higher. The Pennsylvania Department of Environmental Protection, which has kept the number of spills a secret from the public, has responded to Earthworks' request for information by stating that there were 29 spills in 2011 and 47 in 2010. The 2010 spills are now being reported by the Department of Environmental Protection and the 2011 spillages were reported to the Department by the affected companies. Earthworks is continuing to investigate and, as this report will show, the number of spills is likely much higher. PennFuture's analysis shows that on average there are more than one spill per day from hydraulically fractured wells. On September 13, 2011, there were 31 spills, on April 5, 2010, there were 27 spills, and on April 3, 2010, there were 15 spills. Earthworks wrote that "the high number of spills in Pennsylvania is a testament to the ongoing poor quality of life for Pennsylvania communities living near drill pads, who experience the routine leak and discharge of toxic chemicals into their air, water and soil." "Fracking", an acronym for hydraulic 2d92ce491b
