I meant the G7x, which I know is a fantastic camera. Some of the comments have been posted in the wrong section. I'm an owner of both, and they both perform well. Anyway, love the new look of this forum! Last edited by j.walken; 07-19-2011 at 07:35 PM. The best camera ever made with a 21MP sensor (or more) is the iPhone 5. This thread will remain open for the next couple of days in case there are any problems. I wanted to add a few thoughts to the discussion and will take a moment to do so. The "New" look is definitely geared toward those who already have a general idea of the forum and can navigate it. However, it is much harder for those who come here for the first time to find the different areas and see what is available. I've been visiting the

forum for the past couple of years and find it to be an excellent source of technical and educational information. I think this new forum is well done. Very clean, very attractive, with some helpful features. Thank you for doing this work. However, I'm sure that the old

What's New In?

3D drawings, like AutoCAD's sophisticated solids, can now be represented in 2D views—giving you a larger context for your 3D design. Create 3D views using 2D wireframe views (2D) or import 3D models (3D). Add annotations to your drawings to communicate additional information about your design, such as key features, materials, and standards. With tools such as watermark and dimension annotations, you can communicate all sorts of information with your designs. The distance that you can

measure on the drawing canvas has been increased to 10m in order to support more detailed rendering and design work. Drawing Properties: Now there's support for drawing sets. A drawing set is a collection of drawings that can be managed as a single entity for version control, collaboration, or archiving. You can now view, edit, print, and open drawings in AutoCAD in 2D and 3D (faster, smoother, and more efficient). User-defined properties can now be used to control how data is displayed, such as changing the spacing of data labels, fonts, and more. The Plotter: Dramatically improve the speed of plotting, and create much more flexible plots, including 3D and planar plots. Planar plots provide a map view of your data, creating new perspectives from which to look at your data. Add custom axes and axes titles for your planar plot. Advanced Caddis®: With the new Advanced Caddis feature, you can generate several 2D and 3D views of your 3D CAD

model from a single source file. (video: 5:33 min.) Visualize your model in 2D views, such as wireframes and shadows, and add 3D views, such as sections, elevations, and top and bottom views. Advanced Caddis is part of the Caddis 3D package, which also includes a Caddis Quad feature and a 3D Sectioning feature. Actions and Events: Save your time by finding duplicates more quickly and easily. With the new check for actions, you can find the duplicates you need and get started right away. Automatically group related commands together into a single action, so you can work on them all at once. Actions now follow a naming convention so that you can
