Works with both local and external drives The utility comes with a clean look and a user-friendly, so it is unlikely that you can encounter any issues. You can select the drive that you want to test for errors and wait for the tool to finish the analysis to determine if the issues are caused by bad sectors or you need to investigate further. It is worth mentioning that the application works with a plethora of local and external drives, including but not limited to iPods, Secure Digital cards, Micro cards, USB and Compact Flash drives, DE HDD, SATA, IDE, Hardware RAID, SCSI, FireWire, SSDs and Floppy drives. Does not include a tool to address bad sectors Generally speaking, the duration of the scan depends on the size of drive, so you are likely to diagnose a smartphone SD card faster than a local drive. Then again, you should know that the program comes with an option that enables you to scan only specific areas from the drives, providing you have a clue about the area that is responsible for errors and data loss. On the other hand, it is worth mentioning that the application does not include a function that allows you to fix or remedy the bad factors detected. Moreover, the tool is specialized in identifying bad sectors and does not help you find other possible HDD issues. An intuitive utility that helps you detect HDD bad sectors In case you file transfers have become relatively

Fatal error: Call to undefined function IsDefined() in /var/www/vhosts/killerapp.com/httpdocs/crmx.functions on line 17Q: What to do about an upvoted answer with wrong information I had written a program for a university project. I had posted my project and some of my code on pastebin. I had got one upvote on the question and one answer. The answer had a syntax error in my program, and I had managed to fix it with an editor and notepad. I had posted a comment on the answer saying that I had fixed the code, and an edited the question to have only the error and my fixed code. The answer was still upvoted a few hours later. I have now realised that the answer was wrong, because I had gotten the error on wrong line, and the answer should be edited. I've deleted my question and upvoted the answer, and tried to comment on the answer saying that it is wrong. The moderator told me that I couldn't do that, and asked me to flag the answer. I had flagged the answer as "not an answer" instead. Is this a correct solution? What should I have done instead? A: What should I have done instead? You shouldn't have done anything at all! As David C. Rankin stated in his answer: I don't think your suggestion was reasonable. Notify the author that their answer is wrong and how it can be improved. If the answer is very old, the OP may not even be active any more (so not available as a comment) or already deleted the question (thus making no sense to ask them for an edit). If there is no way to reach the author (e.g. no way to comment or edit the answer), then just flag for moderator attention using the "not an answer" flag.
