StopPop.net is a popup blocker software that will auto-detect and block Internet Explorer pop up windows on Windows PCs. This easy to use, easy to understand popup blocker blocks popups from only the web sites you specify while you surf the Web. You have complete control over which popups you allow and which you block. StopPop.net is a simple, effective, and intelligent popup blocker that will keep you from annoying popups while you surf the Web. StopPop.net blocks popups while you surf. Unlike other popup blockers, StopPop.net only runs when you surf. The software is so easy to use even your grandmother will know how to use it. Just click on the StopPop.net icon in the system tray. The icon will change from a red dot to a green dot. Click the green dot to block popups, click the red dot to unblock popups. You can view the sites you allow by clicking on the popup window. The popup window will change to a small box with buttons. Click on the three buttons on the popup window to see the list of sites you allow. You can also delete sites you have blocked, or move them to the bottom of the list. The icon will also change to a red icon if a popup is blocked. Click on the red icon to remove the popups from the block list and replace the icon with a green icon. StopPop.net allows you to block or allow popups from specific web sites. You can allow a popup window from a web site only when you want to see it. You can also block a popup from a site you do not want to see. The popup window can be blocked by clicking on the button for the site you want to block. You can block a popup with a one click operation. You can also drag and drop sites to be blocked or unblocked from the popup window. Another one-click operation can be used to move sites up or down in the list of sites you allow. Sites that you do not want can be moved to the bottom of the list. The site list in StopPop.net can be configured by using a Properties dialog box. You can also create your own list of sites to allow and block. You can manually enter sites into the list or import sites from a file. As of the time of this writing, StopPop.net can be used with Internet Explorer 5.0, 5.5, and 6.0 with service pack 1

KEYMACRO is a free keystroke program that simulates mouse movements and keystrokes so you can perform a number of mouse functions with the keyboard. It simulates mouse movements and keystrokes so you can perform a number of mouse functions with the keyboard. The basic program functionality is:
