Nokia DKU-2 Cable Connector. Nokia CA-70 Cable Connector. Nokia DKU-2 Cable Connector. Category:NokiaThe present invention is directed to integrated circuits and their processing for the manufacture of semiconductor devices. More particularly, the invention provides a method and device for forming a buried contact for high voltage devices. Merely by way of example, the invention has been applied to a buried contact for a FinFET process. But it would be recognized that the invention has a much broader range of applicability. For example, the invention can be applied to buried contact for a gate-all-around devices or to buried contact for a gate last process. Integrated circuits have been formed with smaller and smaller dimensions. With the decrease in the size of integrated circuits, the power requirements for these integrated circuits also have decreased. For example, in the past, the integrated circuits operated at voltages above 200 volts. However, many integrated circuits are now operating with voltage levels below 100 volts. But operating integrated circuits with low voltage levels presents its own set of problems. For example, the threshold voltages of devices formed on integrated circuits have decreased. A threshold voltage is the gate to source voltage required to switch on a transistor. In some processes, the threshold voltage 82138339de
