Application Software AutoCAD supports a variety of AutoLISP applications and AutoCAD LT extensions that allow the user to create, view and edit drawings, drawings, drawings, etc. AutoCAD supports two package management systems: AutoLISP and VCPKG. Networking AutoCAD can work on local or remote computers over a network. Any computer that is running a version of AutoCAD, from Starter Edition to Architectural Desktop, can be the host for a drawing (hosting a drawing) or can be a client (that receives drawings over the network). AutoCAD Architecture, Architectural Desktop, Civil 3D, Electrical, Mechanical, SiteWise, and Vectorworks plugins are designed to work on a remote network. These plugins work in a similar way to the applications built for the local network. The host computer can be the server or can receive drawings from a client. AutoCAD LT, SmallWorks and Architectural Desktop plugins can also work on a remote network. These plugins can also accept import from a local network or directly from the client. AutoCAD LT can be downloaded and installed on client computers over a network. AutoCAD LT can also be used on a private domain with Windows Server Active Directory via the Microsoft.NET Framework. The 'remote network' is a shared folder on the server. Client computer boots to the server, which is called the host. The user shares a folder on their desktop with the host. The host then shares the drawing in the folder with the client. AutoCAD LT is a service that can be installed on client computers. This service will allow the use of an Active Directory database to distribute drawings. The client software is a download that can be installed on the local computer. The client requires a license key which is sent to the server. Networking technology is required to enable a drawing to be shared over a network. AutoCAD can connect to other AutoCAD drawings and share features or perform a database query. These connections to other drawings is often called a bridge. AutoCAD LT uses the same technology. AutoCAD LT works only on the local computer or on a network where the Autodesk Exchange Server is installed. The drawing is stored on the Autodesk Exchange Server and not on the host. 3D AutoCAD LT 3D (formerly VectorWorks LT 3 a1d647c40b
